

Top 5 Reasons to Migrate from Symantec to Mimecast

and why you should reconsider being protected simply by O365.

1

Superior Phishing and Malicious Payload Detection, Now and Going Forward

- Email is the #1 messaging system used by cybercriminals to breach organizations
- 94% of organizations experienced phishing attacks in 2018
- 55% of organizations reported increases in phishing attacks over the past 12 months
- The FBI estimates that losses due to successful business email compromise attacks have exceeded \$12 billion
- 16% of emails deemed safe by Office 365 are spam or phishing attacks

2

Fully Integrated Cloud Platform.

- A single interface for security, continuity, awareness training, and backup improves administrator efficiency
- “[Office 365] provides only a piecemeal view of the threats that face an organization across various threat vectors – it does not offer a consolidated view

3

True Backups and Rapid Recovery.

- Emails and attached files are critical business records and must remain available and be immediately recoverable in the case of a ransomware attack.
- “Office 365 does not provide a persistent backup/recovery of email data”
- “The reality is that once it is gone [from Office 365], there is a good chance it really is gone”

4

Not Just Customer Support. Customer Success.

At Mimecast, we know that successful customers don't just require great products, but also training, education and flawless implementation. That's why we've created the **Legendary Customer Success** program. By pulling these elements together, we help our customers become legends inside their organizations.

5

Proven Ability to Migrate Symantec Email Security Customers.

Mimecast has successfully transitioned more than 3,800 organizations globally from Symantec on-premises and cloud-based email security solutions

Join over 3,800 former Symantec email security customers that have already made the switch to Mimecast
